Professional Summary

Game Designer with **2 years of experience** shipping mobile casual titles across Block Puzzle, Match-3, and Match-3D. Took a live title **from concept to launch as sole designer**, owning levels, economy, meta-progression, and LiveOps. Designed **900+ levels** across three live games, using difficulty tuning, DDA, analytics, and A/B testing to improve **retention, engagement, and monetization**. Interested in level and systems design for data-driven casual game teams.

Core Skills

Game Design: Level Design, Systems Design, Feature Design, Economy Design, Balancing & Tuning, FTUE, Meta Progression

Analytics & Experimentation: DDA, A/B Testing, Remote Config, Player Flow & Progression Analysis

Documentation: GDDs, Wireframing, Test Cases, Cross-functional Collaboration

Tools: Unity, GameAnalytics, Firebase, Figma, Google Docs/Slides/Sheets, Git, GitHub

Professional Experience

Jr. Game Designer

Hexar Games LLP | Mobile Casual Games — Android & iOS

June 2024 – Present

Rajkot, Gujarat, India

Cubescapes | Block Puzzle, Casual — Android | [Play Store](#)

- **Sole Game Designer** on the title: owned the full game design and worked with the development team to ship the game **from concept to launch**.
- Designed **400+ levels**, from FTUE through to advanced content, tuning board layouts and piece supply so difficulty came from spatial planning and board-lock risk rather than time pressure.
- Designed and owned the **meta-layer**: a landmark-upgrade progression system that gave players a long-term goal beyond the level map, plus the **full game economy** — currency sources, sinks, and booster pricing — balanced to keep upgrades reachable without removing spend motivation.
- Improved **D1 retention** by analysing the progression funnel, identifying the levels where new players dropped, and re-tuning that early sequence.
- **Reduced early churn** and increased session length through targeted pacing and difficulty changes across the mid-game.
- Wrote and implemented the GDDs for the **Rail Rush** marathon event and the **Win Streak** feature; set up Firebase for remote configuration, analytics dashboards, and player messaging.
- Designed weekend, month-end, and seasonal offers to support monetization goals.

Super Match Factory | Match-3D, Casual — Android & iOS | [Play Store](#)

- Designed **300+ levels**, tuning object density, visual clutter, and tray pressure so challenge scaled through search difficulty and sorting decisions rather than raw move limits.
- Applied **Dynamic Difficulty Adjustment (DDA)** and progression analysis to reduce early-level churn and improve **D7 retention**.
- Led **LiveOps** design end to end, writing the GDDs, test cases, and implementation plans for a **Battle Pass** system and the **Secret Mission** event.
- **Improved monetization** through session-based offers, Battle Pass design, and seasonal, monthly, and weekly offer calendar planning.
- Increased engagement and session length by introducing a task-based event system, informed by player behaviour data.
- Implemented analytics events in **GameAnalytics** to track progression, retention, engagement, and monetization, and integrated **Firebase Remote Config** for remote-controlled offers, push notifications, and A/B testing.

Royal Mansion | Match-3, Casual — Android & iOS | [Play Store](#)

- Designed **200+ levels** with a balanced difficulty curve, using obstacle layering and blocker placement to vary the failure pressure across the run.
- Wrote the **Game Design Document for new obstacle types**, expanding the mechanical variety available to future level content.

Education

G. H. Patel Institute of Technology

B.Tech in Computer Engineering — CGPA: 8.5/10

2021 – 2025

Anand, Gujarat, India

Shakti School

Higher Secondary Certificate (HSC) — 90.92%

2020 – 2021

Rajkot, Gujarat, India

Achievements

- **Smart India Hackathon 2023 Finalist** – Software Edition, National Level, Government of India
- **PitchPower (SSIP – GCET Ideathon) Winner**
